The research described in this thesis was performed at the Department of Hematology of the Leiden University Medical Center (LUMC), the Netherlands, and was financially supported by the Dutch Cancer Society (project numbers 10222/2016 and 11867/2018-2). The mass spectrometry work was part of the Investment Grant NWO (Dutch Research Council) Medium Programme (project number 91116004), which was partly financed by ZonMw (the Dutch Organisation for knowledge and innovation in health, healthcare and well-being). D.I. van der Lee was supported by the MD/PhD-programme of the LUMC and by Doelfonds Leukemie of the Bontius Stichting | LUMC Research Foundation.

Promotiecommissie

Prof. dr. N.F.C.C. de Miranda

Prof. dr. R. Arens

Prof. dr. J.E.M.A. Debets (Erasmus Medical Center)

Prof. dr. I.J.M. de Vries (Radboud University Medical Center)

Table of contents

Chapter 1	General introduction and aim of the thesis	7
Chapter 2	The value of online algorithms to predict T-cell ligands created by genetic variants	35
Chapter 3	Mutated nucleophosmin 1 as immunotherapy target in acute myeloid leukemia	71
Chapter 4	An HLA-A*11:01-binding neoantigen from mutated NPM1 as target for TCR gene therapy in AML	111
Chapter 5	Mutated <i>DNMT3A</i> creates a public HLA-DQ-binding neoantigen on acute myeloid leukemia	141
Chapter 6	Summary and general discussion	183
Appendices	Nederlandse samenvatting	206
	PhD portfolio	212
	List of publications	218
	Curriculum vitae	220
	Dankwoord	221
