Cross-cultural acceptability of interventions that may increase control at the
end of life in people with dementia

须静媛 (Xu Jingyuan)

COLOPHON

The work in this thesis was conducted at the department of Public Health and Primary Care of the Leiden University Medical Center.

Academic network for research in elderly care

The studies in this thesis took place in the University Network for the Care Sector South Holland (UNC-ZH). In this network, the Leiden University Medical Center (LUMC) collaborates structurally with 11 elderly care organisations in South Holland (Aafje, ActiVite, Argos Zorggroep, Haagse Wijk- en Woonzorg, Laurens, Marente, Pieter van Foreest, Saffier, Topaz, Woonzorgcentra Haaglanden, Zonnehuisgroep Vlaardingen).

Caregivers, policy makers, researchers, students, residents and relatives work together to improve the quality of care and quality of life for vulnerable older people. The UNC-ZH is a regional platform, inspirator and learning network for innovation in long-term care. Research, education and training, and practice are closely related.

Funding

The research presented in thesis was supported by the European Research Council (Consolidator Grant agreement ID 771483).

Financial support for printing of this thesis was provided by the department of Public Health and Primary Care of the Leiden University Medical Center.
