Author: Chabani, Elaheh (Ellahe)

Title: Enhancing visuospatial processing skills in children

Issue Date: 2014-04-15

Acknowledgements

This journey began, not as a doctoral candidate, but as a person battling life events that deeply impacted me. The journey has been arduous filled with many ups and down, turns and twists. However, I am reaching the peak for which I am deeply indebted to the following valued people that I would like to acknowledge as vital to my journey.

I would like to begin by thanking all the children and teachers who have been with me since the beginning.

I am appreciative of Prof. Dr. Bernhard Hommel, who has been willing to support me when I was at a dead end. It is clear to me that Bernhard is the person that has made this dissertation possible today and I want to sincerely thank Bernhard for his steadfastness in keeping this body of work moving forward to its completion.

I would like to thank all my committee members who offered their guidance and many suggestions which added depth and breadth to the dissertation.

I would like to thank the NWO for their economic support.

I would like to thank Raphael Luhahe my old friend and colleague who generously helped me at various stages of this project and encouraged me continually in undertaking this work.

In closing I would like to extend my greatest thanks to my friends, loved ones and close family members, who were the ones that kept me afloat when the journey felt overwhelming and just plain crazy at times.

Curriculum Vitae

Ellahe (Elaheh) Chabani was born on May 5th 1958 in Iran and moved to France in 1977. She studied Mathematics and Physics at University Louis Pasteur (ULP)–Strasbourg/France. In 1984 she graduated in Industrial Electronic - Software and Hardware development. She started her career as an electronics and computer instructor and project manager in a different Institute of Technology in Strasbourg. After her move to The Netherlands, she worked for international schools and international/European organizations. Her scientific interests broadened to the field of psychology. She obtained her master's degree from Leiden University in 2007. In 2008, she received a 4-year NWO Mozaïek grant. Her interest was to bridge her two domains of expertise by developing and implementing a computerized visuospatial test assessment tool for children. The results of this undertaking are (partially) presented in this dissertation. Ellahe aspires to continue to evaluate and improve other computer-based assessment tools, and to continue to work with interested people.
